EX:5	EDA – DATA VISUALIZATION	AD23632
------	--------------------------	---------

Aim:

To explore and understand the underlying patterns, distributions, and relationships within the dataset through visual representations, which aids in uncovering insights, detecting anomalies, and guiding further analysis.

CODE:

```
import matplotlib.pyplot as plt
```

```
import pandas as pd
```

```
import numpy as np
```

```
df = pd.read_csv("/content/data.csv") # Replace with your file
```

```
df.head()
```
